

## Cyber Education

Cyber risk will never be completely mitigated by focusing on technology alone and, with a large sector of the workforce embracing a more permanent hybrid working model and with the rise year-on-year of ransomware attacks addressing your team's cyber security training needs has never been more important.

Research suggests as many as 90% of all successful cyber-attacks involve some form of human error; however, traditional security awareness training solutions often fail to substantially impact user behaviour. Adding Cynergy Educate to your portfolio will not only significantly improve cyber security attitudes and behaviours, but also provide the data you need to measure and report on its impact.

The intelligent online platform goes beyond simple awareness training and has the ability to not only simulate realistic phishing and smishing campaigns, but also to react to user behaviours in real time when linked with your SIEM, sending incident-based tailored training and policy reminders in response to identified risky behaviour.

The combination of online and face-to-face learning, bitesize security videos, regular individual assessments, and interactive training sessions available in up to nine languages cover the full spectrum of cyber security from authentication, social engineering and data protection to mobile device, email, web, and Wi-Fi security. Users will receive certificates upon successful completion of the courses.

The platform also provides metrics for analysis and comprehensive risk and compliance reporting with our additional service options including support with configuration, workshops, training plans, quarterly service reviews, and bespoke training sessions.

Cynergy Educate arms your workforce with the knowledge and education they need to become an impenetrable layer of defence and actively prevent the cyber threats that technological defences can't do alone. A cost-effective approach to a high value outcome Cynergy Educate delivers measurable improvements to your organisation's cyber security posture.

### KEY BENEFITS

- Reduce staff susceptibility to phishing by more than 90%
- Identify policy and best practice gaps in staff knowledge
- Accurately track changes in staff cyber security behaviours
- Large training library and ability to upload company policies
- Seamless integration with Microsoft Teams
- Insightful risk and compliance reporting capability
- Links with SIEM alerting for reactive based training
- Measurable return on investment
